

LIQUEFIED NATURAL GAS FACILITY

Robeson County, N.C.

PROJECT OVERVIEW

Piedmont Natural Gas is committed to providing safe, reliable and affordable natural gas. We are building a liquefied natural gas (LNG) storage facility in Robeson County, N.C., to supply natural gas service to customers during peak usage days, when extreme low temperatures create a higher-than-normal demand for natural gas.

FAST FACTS

Location: The LNG site is located in Robeson County on company-owned property between Maxton and Red Springs in an area zoned for heavy industrial use. Its footprint will be 60 acres, situated within a 685-acre parcel, which offers an abundance of green space. We work to locate storage facilities along our natural gas delivery system where they will improve reliability for the greatest number of our residential, commercial and industrial customers.

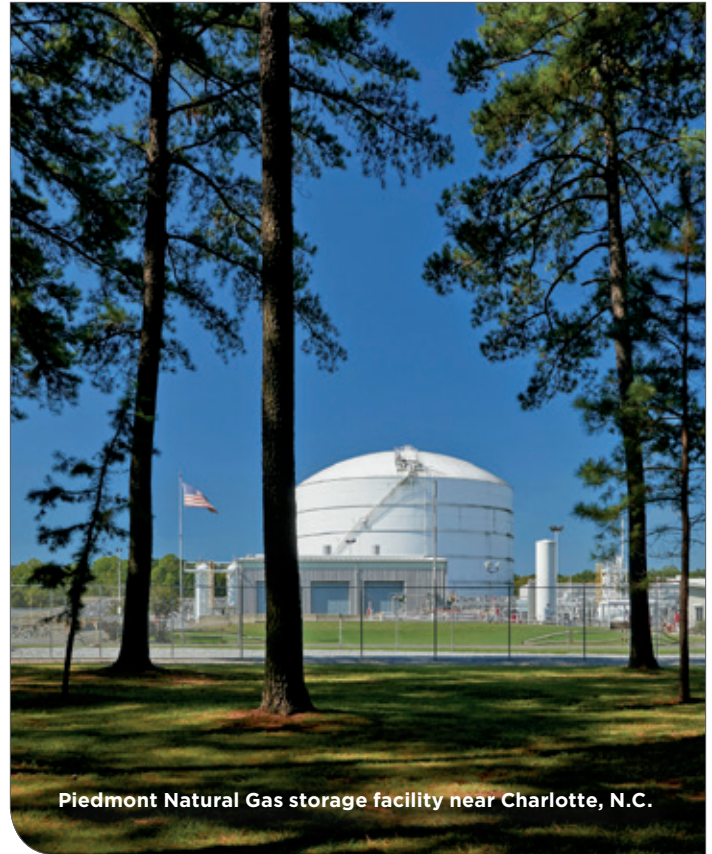

Function: The 1 billion-cubic-foot LNG storage facility will have the ability to serve about 100,000 homes on a cold day, using affordable natural gas that was purchased and stored when prices were low.

Timing: Construction is expected to begin in June 2019 with an estimated completion date in the summer of 2021.

Ownership: The facility will be 100 percent owned and operated by Piedmont Natural Gas. Piedmont owns and safely operates LNG facilities near Charlotte, N.C., Bentonville, N.C., and Nashville, Tenn.

Cost: We expect the project to cost approximately \$250 million.

Staffing: The site will be staffed 24 hours a day, seven days a week, by trained Piedmont Natural Gas personnel.

LNG FACILITIES

Liquefied natural gas is a safe, reliable fuel source. An LNG facility liquefies natural gas, which allows it to be stored in a fraction of the space. When the supply is needed, we turn LNG back into its gaseous state and inject it into our pipeline network to support service to Piedmont Natural Gas customers during peak usage days.

SAFETY

Piedmont's No. 1 priority is the safety of our natural gas infrastructure, our communities and our employees. We have more than 40 years of experience owning and safely operating LNG facilities throughout the construction process and ongoing operations. We build multiple and redundant safety systems into all aspects of our natural gas infrastructure.

BENEFITS INCLUDE:

Reliability:

- This project is part of the ongoing investments Piedmont makes in its natural gas system to provide our customers with the most reliable service
- Providing additional supply during the coldest days of the year

Low cost:

- When compared to other options for providing additional gas supply or storage, building the Robeson facility is the lowest-cost solution.

Economic and community growth:

- We are committed to investing in this community, and the LNG facility will deliver immediate and significant economic benefits to the local communities and help drive economic growth
- This includes more than \$800,000 in annual tax revenue to Robeson County, benefiting local services such as health care, schools and emergency response
- The project also will create up to 150 jobs during the two years of construction and 10 to 12 permanent jobs to manage the operations of the facility

ENVIRONMENTAL PROTECTION

Piedmont is committed to protecting cultural sites, environmentally sensitive areas and endangered species. We work with appropriate federal and state agencies and fully comply with all applicable laws and regulations. In addition, Piedmont has its own standards designed to minimize the impact of our construction activities on surrounding areas.
